Sharpe Ratio	0.76		

Market Strategy (Risk Management)

DEFENSE: The current beta is 10.9% vs. the benchmark of 55.5% down from 11.5% last week. We remain very defensive. We see a 10% correction in global equities and do not see new highs. Q1 earnings season starts this week and what companies tell us about trade and orders will help to clarify upside versus downside risks. It's clear the global economy is slowing. The impact of higher interest rates and less liquidity is having an impact along with tariffs. We see more clouds than green shoots. Recent data in China once again is debt fueled stimulus that can always help, but is doing major damage to the longer-term outlook. The FOMC did change tact dramatically in recent weeks and the yield curve 3M-10Y inversion suggests Recession is coming--the only question is when. The Fed is now well aware that they probably tightened liquidity too much, which should be a warning sign of how fragile global growth really is and how leveraged it is to cheap money and debt!

Equity Country/Sector Allocation & Trades

We are not concerned about a new bull market developing. The markets are excited about a trade resolution and a dovish Fed. Nevertheless, the global economy continues to slow and the lagged impact of tighter policy will likely have negative impacts for growth. The global economy is only growing based on leverage and easy money. In the long run, we are seeing huge misallocation of capital and the credit bubble that's building will likely end badly. China may be at the front of that wave with the credit risk of the S&P 500 flirting with the biggest credit bubble in history. To say we are a growth skeptic would be an understatement. For the next several years, tactical asset allocation may be our only real return possibility. Europe is cheap because it's a house of cards with it's strongest economy, Germany, basically in a recession. EM is cheap because it's leveraged to Europe. The US is overvalued because it's the only economy that's working, but that's been 100% leverage for the past decade with free money, which is coming to an end--especially with the political shift to the LEFT.

Currency Strategy & Trades

We have moved our U\$ target over the next year to 76-70 cents with a bias towards the ALL-TIME low of 62 cents by the time the global recession plays out. Twin deficits and stupidity in Ottawa are the catalysts along with world energy prices collapsing in the downturn. We look to build US\$ exposure towards 50% of the portfolio in the coming months. That would push the beta of the portfolio to negative levels where we hope to have positive returns as the bear plays out.

Fixed-Income/Commodity Allocation & Trades

The most important consideration in our fixed-income portfolio is interest-rate sensitivity versus the benchmark of 6.21. The duration of the portfolio is 2.67 up 0.87 last week. We look to increased exposure to emerging market local currency debt (EMLC) where we see 10%+ total returns over the next year. It yields more than 6% and has potential currency gains over the next few years. We added to short-term high yield (ZST) to boost yield in the portfolio. On the currency front, we like the euro at 1.13 and lower and see a move back to 1.18 so we look to international government debt (BZW) as a way to play FX gains. With yields so low globally, it's not a duration call. We look to add more duration in the US and our target ranges have shifted significantly after the FOMC balance sheet shift and yield curve inversion 3M-10Y.

BMO Global Asset Management is a brand name that comprises BMO Asset Management Inc., BMO Investments Inc., BMO Asset Management Inc. and BMO's specialized investment management firms. BMO Mutual Funds are offered by BMO Investments Inc., a financial services firm and separate legal entity from the Bank of Montreal. Commissions, management fees and expenses may be associated with mutual fund investments. Please read the prospectus before investing. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.

1 Benchmark is the return of the targeted portfolio 60% global equities and 40% global bonds hedged to Canadian dollars; 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period.
