Sharpe Ratio	0.83			

Market Strategy (Risk Management)

DEFENSE: The current beta is -0.8% vs. the benchmark of 55.1% up from -2.8% last week. We remain in defensive mode and look to take advantage of mispriced assets. Great start to the year for a portfolio that thrives off increased volatility. The Novel Coronavirus that is gripping investor attention appears to be still in the early innings. Complicated by a surging Bernie Sanders in key polling states and you have a lot of question marks not priced in to the markets. We heard chatter Friday that Buffett was chomping at the bit to add to energy holdings that are now yielding close to 5% after getting hammered on ESG and Coronavirus growth concerns. While we are in the camp that the sector is in secular decline due to ESG, we see the US Shale boom lasting another 5-10 years and expect production to remain strong. That said, the Green New Deal, offered by the political LEFT is another secular headwind. The US sector (XLE) has not been this relatively and absolutely cheap since the 2016 trough.

Equity Country/Sector Allocation & Trades

The FOMC (and other Central Banks) are aligning towards increasing their tolerance for inflation. Now we do not know too many people that actually believe the core trimmed mean inflation rate is below 2%, but that is what the data suggests. Add in a growing policy willingness to add to the already stressed fiscal spend and you have the makings of a stagflation cycle. Bad for most investment styles, but great for tactical that thrives off increased volatility and uncertainty. The sharp increase in equity exposure in recent weeks has been tempered with a short beta matching (QBTL, BTAL). So while yield has been boosted, the overall portfolio risk remains close to a zero beta. And our asset mix is clearly tilted towards risk off for now. We should see more downside to equities in the coming weeks. We are most interested in EM exposure that in many cases trades at half the multiple seen in the US. Despite all of China's challenges, their silk road initiative should provide a stable value base to the region that tends to throw off better yields than the grossly over priced US market.

Currency Strategy & Trades

We have moved our US target over the next year to 76-70 cents with a bias towards the ALL-TIME low of 62 cents by the time the global recession plays out. Twin deficits and stupidity in Ottawa are the catalysts along with world energy prices collapsing in the downturn. We are now at benchmark exposure in the US\$ around 53% of the world. We can increase that should the C\$ strengthen under the geopolitical spike in world oil prices--that won't last. Peak crude demand is high and supply is plentiful!

Fixed-Income/Commodity Allocation & Trades

The most important consideration in our fixed-income portfolio is interest-rate sensitivity versus the benchmark of 6.21. The duration of the portfolio is 5.96 up 0.02 last week. The idea that the FOMC should be cutting rates with the unemployment rate below 4% is a gross mispricing of risks and underscores the fragile nature of world growth. We will never be able to pay off the debt and the only outcome we see is a debt monetization that is hugely bullish for gold long term. The 2020 US election will see the Democrats looking to spend bags of money as the DEBT troubles escalate. Bond supply will cause a problem at some point, but that is when a permanent QE is likely to be the only policy choice of a failed regime. The world MUST adjust to a 1-2% growth outlook and stop artificial policies to boost it and pull forward demand at the catastrophic cost of the debt burden.

BMO Global Asset Management is a brand name that comprises BMO Asset Management Inc., BMO Investments Inc., BMO Asset Management Inc. and BMO's specialized investment management firms. BMO Mutual Funds are offered by BMO Investments Inc., a financial services firm and separate legal entity from the Bank of Montreal. Commissions, management fees and expenses may be associated with mutual fund investments. Please read the prospectus before investing. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.

1 Benchmark is the return of the targeted portfolio 60% global equities and 40% global bonds hedged to Canadian dollars; 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period.
