

BMO Tactical Balanced ETF Fund Highlights

Core Tactical/Strategic Portfolio Outlook/Adjustments

On a YTD basis, we have managed to scratch out a positive return with the average balanced strategy down 5-6% and managed to turn our upside/downside capture numbers back to a bit more favourable tilt. A recent shift in the quarter was to increase duration when the US 10 and 30 year yields moved to more attractive yields and the 2s-10s curve started to invert late in the quarter. The market is telling us the Fed is between a rock and a hard place, which is not good for asset prices in general. Funding QT and rising rates will be a bigger challenge than was spending the money and monetizing it into the capital markets. In Q1, the best assets were real. Gold, base metals, and commodities in general. While we trimmed energy exposure into the post war spike, we think the world does not work well with elevated energy costs. We are likely heading for a significant growth shock that still will not fix supply shortages, but will take the edge off. Again, bad for asset markets. The portfolio is now tilted towards defense, but we do not see a dramatic decline for now. Odds of a retest of the recent lows in the next quarter or two is high. If we see additional strength, our bias is to add additional downside protection.

Macro Market Strategy

The rally back up to resistance zones has us adding back some volatility protection to the portfolio. We look to add more on strength and reduce on weakness. We think this is a very two-way market for the next few months. Once QT starts, we would be more concerned that equity risk premiums will rise and multiples will contract. For now, the FOMC tells us they have the tools to navigate a soft landing and the market believes them. The risk of a policy mistake is significant. But positions got very defensive and so market is capable of recovering some of the damage.

Chart of the Week

PRO-EYES - Berman's Call

Risk Level **High**

The core portfolio beta is 73.3%. The degree of delta protection is -25% while the value of beta protection is 45%.

The tactical PRO-EYES factor remains the most oversold since the extremes of COVID, but the big picture suggests end of cycle risks which means rallies should be sold and the market can offer good two-way trade opportunities. Increase the tactical focus and bring out the end of cycle playbook until inflation cools and there is visibility to the end of the rate hike cycle. Forward money market curves suggest easing in 2024 and beyond. The next year or two will likely be extremely choppy.

1 Benchmark is the return of the targeted portfolio 60% global equities and 40% global bonds hedged to Canadian dollars; 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period.
