

BMO Tactical Balanced ETF Fund Highlights

Core Tactical/Strategic Portfolio Outlook/Adjustments

Base metals found very strong resistance last week on the recognition of a policy mistake and increased probability of a recession. Despite materials shortages and under investment, base metals will likely correct hard if global growth is slowing. It did not help that Alcoa downgraded their outlook. We sold our longer-term core base metals exposure (ZMT) and will look to reload as the core thesis of electrification and infrastructure development has decades runway. Some of the proceeds went to the very oversold longer-term growth biotech sector (XBI) and into China A-Shares (KBA), where most of the bad news is well known and mostly discounted. In the feature chart this week we show that 30-year USTs started to probe into the multi-year resistance area. We added more duration this week (TLT) and now have a 6% weight with a target of 10% heading onto what almost certainly is setting up to be a recession in 2023 if you believe the money market curves.

Macro Market Strategy

The rally back up to resistance zones has us adding back some volatility protection to the portfolio. We look to add more on strength and reduce on weakness. We think this is a very two-way market for the next few months. Once QT starts, we would be more concerned that equity risk premiums will rise and multiples will contract. For now, the FOMC tells us they have the tools to navigate a soft landing and the market believes them. The risk of a policy mistake is significant. But positions got very defensive and so market was capable of recovering some of the damage. The Street narrative has turned very hawkish recognizing how far the FOMC is behind the curve. The eurodollar curve shows aggressive tightening into mid 2023 followed by an easing cycle. This means the money market sees a recession. The stock market multiple clearly does not. Which market is correct?

Chart of the Week

PRO-EYES - Berman's Call

Risk Level High

The core portfolio beta is 72.4%. The degree of delta protection is -22% while the value of beta protection is 48%.

The tactical PRO-EYES factor remains the most oversold since the extremes of COVID, but the big picture suggests end of cycle risks which means rallies should be sold and the market can offer good two-way trade opportunities. Increase the tactical focus and bring out the end of cycle playbook until inflation cools and there is visibility to the end of the rate hike cycle. Forward money market curves suggest easing in 2024 and beyond. The next year or two will likely be extremely choppy.

"Forward-looking statements," can be identified by the use of forward-looking terminology such as "may", "should", "expect", "anticipate", "outlook", "project", "estimate", "intend", "continue" or "believe" or the negatives thereof, or variations thereon, or other comparable terminology. Investors are cautioned not to place undue reliance on such statements, as actual results could differ materially due to various risks and uncertainties.

1 Benchmark is the return of the targeted portfolio 60% global equities and 40% global bonds hedged to Canadian dollars; 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period.
